SPECIAL NOTICE

This statistical report presents tables showing current and historical data on U.S. foreign trade in agricultural products. Commodity and country information is for the most recent 2-year period. Statistics for calendar year 1992 are preliminary.

U.S. foreign agricultural trade statistics in this report were derived from official data released by the Bureau of the Census. Agricultural commodities are defined as (1) nonmarine food products and (2) other products of agriculture, including fibers, raw hides and skins, fats and oils, and beer and wine, which have not passed through complex processes of manufacture. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in-transit through the United States from one foreign country to another when documented as such by the U.S. Customs Service.

Trade statistics for selected nonagricultural products, including fertilizer, fish, agricultural chemicals, farm machinery, and manufactured tobacco, are presented at the end of the commodity group tables.

Exports

Export data include "exports of domestic merchandise," defined as commodities grown, produced, or manufactured in the United States, and commodities of foreign origin that have been changed from the form in which they were imported. The export value is generally equivalent to a free-alongside-ship (f.a.s.) value at the U.S. port of export, based on the transaction price and including inland transportation, insurance, and other costs. Agricultural exports have been adjusted for transshipments through Canada based on information provided by the Federal Grain Inspection Service. More than 500 revisions have been incorporated into the 1991 tables.

Imports

Import data are "imports for consumption," which include entries for immediate consumption and withdrawals from bonded Customs warehouses. The import value is defined as the "Customs value," based on the foreign market value, export value, or constructed value, and excludes import duties, freight, insurance, and other charges incurred in moving the commodity to the U.S. port.

SUMMARY OF REPORT

Central and Eastern European Agriculture Adapts to Open Markets

Number 10, February 1993

Contact: Jason Lamb, (202) 219-0620

Central and Eastern European (CEE) agriculture underwent dramatic change during the last 3 years. The introduction of market pricing, open borders, and increased freedom of entry and exit for firms occurred without the institutional and legal structures necessary for a market economy. Progress varies widely by country, but the northern countries of Poland, Hungary, and the Czech and Slovak Republics are much further along than the southern countries of Bulgaria, Romania, and Yugoslavia. The effect of market reforms on agriculture is documented in the 76-page report, *Agricultural Policies and Performance in Central and Eastern Europe, 1989-92* (FAER-247).

Many CEE countries shifted from pre-reform tight agricultural supplies or outright shortages to post-reform surpluses. Food availability and diversity have increased appreciably. Food prices have risen in nominal terms, but generally have lagged behind the overall inflation rate, reducing the prices of many food items relative to other goods and services.

But, farm financial performance has been poor. Food prices have risen, but less than farm input prices. Many issues regarding land and asset ownership in the farm sector remain unresolved, leading to uncertainty for planting and production. Consumer demand for agricultural products is depressed due to the sudden rise in consumer prices, while nominal income growth has been restricted through wage/pension caps. In addition, where the farm sector previously enjoyed unlimited demand for its products, it now faces stiff competition from a wider array of consumer products.

U.S. Export Opportunities

The value of U.S. agricultural exports to CEE countries dropped in 1991 due to the CEE's lack of hard currency needed to buy U.S. agricultural products and, more important, the CEE surplus of agricultural products from lower domestic demand and bumper grain harvests. U.S. agricultural exports of \$225.3 million in 1991 were well below the 1990 level of \$536.2 million. The level of U.S. agricultural exports has been bolstered by

food aid granted to the CEE area, especially to Romania. CEE markets should stabilize and diminish the need for food aid.

Long-term export opportunities exist for U.S. agricultural inputs, machinery, and processing facilities, as well as soybeans and meal, cotton, tobacco, rice, certain specialty foods (nonindigenous fruits and fruit products, nuts), and consumer-ready foods. In addition, U.S. expertise in financing, farm management, and food processing is needed in the CEE countries. More short-term food aid may be needed in Albania, Romania, and some of the former Yugoslav republics.

Agricultural Production Steady as Domestic Demand Drops

The problems faced by the CEE agricultural sector had a smaller impact on production in 1991 than economists expected. Gross agricultural production in the region declined by 4.9 percent compared with 1990. Production levels in 1991 for most grains exceeded their 1986-90 averages, while many livestock and oilseed products fell below their 1986-90 levels.

**Foreign Agricultural Trade of the United States, Calendar Year 1992
Supplementary Tables.** By Mary L. Fant, Commodity Economics Division, Economic
Research Service, U.S. Department of Agriculture.

Abstract

This report presents statistical summaries of U.S. foreign trade in agricultural products by country during calendar years 1991 and 1992. Exports and imports valued at more than \$1 million are shown. U.S. Bureau of the Census Harmonized System (HS) listings are grouped in standardized economic classes or commodity groups.

Keywords: Agricultural trade, agricultural exports, agricultural imports, trade statistics, farm product exports.

Acknowledgments

Lilia E. George did the electronic word processing. Principal coordinator was Thomas A. Warden. Editorial support was provided by Jim Carlin, Research Information Branch, Economics Management Staff. Data processing support was furnished by Sharlan Starr and William Meiller, Agriculture and Trade Analysis Systems Branch, Data Services Center.

Central and Eastern European Agriculture Adapts to Open Markets

Number 10, February 1993

Contact: Jason Lamb, (202) 219-0620

Central and Eastern European (CEE) agriculture underwent dramatic change during the last 3 years. The introduction of market pricing, open borders, and increased freedom of entry and exit for firms occurred without the institutional and legal structures necessary for a market economy. Progress varies widely by country, but the northern countries of Poland, Hungary, and the Czech and Slovak Republics are much further along than the southern countries of Bulgaria, Romania, and Yugoslavia. The effect of market reforms on agriculture is documented in the 76-page report, *Agricultural Policies and Performance in Central and Eastern Europe, 1989-92* (FAER-247).

Many CEE countries shifted from pre-reform tight agricultural supplies or outright shortages to post-reform surpluses. Food availability and diversity have increased appreciably. Food prices have risen in nominal terms, but generally have lagged behind the overall inflation rate, reducing the prices of many food items relative to other goods and services.

But, farm financial performance has been poor. Food prices have risen, but less than farm input prices. Many issues regarding land and asset ownership in the farm sector remain unresolved, leading to uncertainty for planting and production. Consumer demand for agricultural products is depressed due to the sudden rise in consumer prices, while nominal income growth has been restricted through wage/pension caps. In addition, where the farm sector previously enjoyed unlimited demand for its products, it now faces stiff competition from a wider array of consumer products.

U.S. Export Opportunities

The value of U.S. agricultural exports to CEE countries dropped in 1991 due to the CEE's lack of hard currency needed to buy U.S. agricultural products and, more important, the CEE surplus of agricultural products from lower domestic demand and bumper grain harvests. U.S. agricultural exports of \$225.3 million in 1991 were well below the 1990 level of \$536.2 million. The level of U.S. agricultural exports has been bolstered by

food aid granted to the CEE area, especially to Romania. CEE markets should stabilize and diminish the need for food aid.

Long-term export opportunities exist for U.S. agricultural inputs, machinery, and processing facilities, as well as soybeans and meal, cotton, tobacco, rice, certain specialty foods (nonindigenous fruits and fruit products, nuts), and consumer-ready foods. In addition, U.S. expertise in financing, farm management, and food processing is needed in the CEE countries. More short-term food aid may be needed in Albania, Romania, and some of the former Yugoslav republics.

Agricultural Production Steady as Domestic Demand Drops

The problems faced by the CEE agricultural sector had a smaller impact on production in 1991 than economists expected. Gross agricultural production in the region declined by 4.9 percent compared with 1990. Production levels in 1991 for most grains exceeded their 1986-90 averages, while many livestock and oilseed products fell below their 1986-90 levels.

U.S. Initiative Supports Economic and Trade Reform in Latin America and the Caribbean

Number 17, May 1993

Contact: Liana Neff, (202) 219-0610.

Western Hemisphere countries are seeking trade liberalization that may eventually lead to a hemispheric free trade zone. The Enterprise for the Americas Initiative (EAI) is a U.S. program supporting economic and trade reform underway in Latin America and the Caribbean. The program's major provisions are described in a new USDA report by the Economic Research Service, *The U.S. Enterprise for the Americas Initiative: Support for Western Hemisphere Economic and Trade Reform*.

The initiative's objectives are to promote liberalized trade, reduce official debt, and increase foreign investment in the Latin American and Caribbean countries. These countries have renewed regional agreements and have taken new steps toward stabilizing their domestic economies. No longer following protectionist import-substitution policies, regional and subregional groups of countries are promoting unilateral reductions

in trade barriers and greater international interaction by their members.

Trade liberalization began in the Western Hemisphere in the 1960's, but was largely unsuccessful. Latin American initiatives renewed the effort in the 1980's, and the EAI has given added focus and direction to ongoing trade and investment liberalization in the 1990's. The United States has completed a free trade agreement with Canada and initialed a North American Free Trade Agreement (NAFTA) including Mexico on October 7, 1992. The EAI begins to expand this process throughout Latin America and the Caribbean, a process that may take many years because of the complex issues involved.

The EAI proposes action in three areas for the Western Hemisphere: (1) liberalizing trade, (2) reducing the debt owed to the United States by less-developed countries (LDC's), and (3) increasing foreign investment in LDC's.

Only 6 percent of the agricultural exports of Latin American and Caribbean countries go to other Latin American and Caribbean countries; nearly a third of the exports go to the United States.

Sugar and Corn Sweetener Demand Shift in Mexico, Canada, and the U.S.

Number 18, May 1993

Contact: Ron Lord (202) 219-0888

The trade flows in sugar and high-fructose corn sweetener (HFCS) among Mexico, Canada, and the United States consist mainly of U.S. exports of refined sugar to Mexico, U.S.-Canadian two-way trade in sugar and HFCS, and recent growth in U.S. HFCS exports to Mexico. A new USDA report, *Sugar and Corn Sweetener: Changing Demand and Trade in Mexico, Canada, and the United States*, demonstrates how the North American Free Trade Agreement (NAFTA) could increase these trade flows by reducing tariffs and allowing competitive advantage (for example, the United States in HFCS) to satisfy regional consumption habits.

The United States and Mexico produce a significant share of their sugar needs, whereas Canada imports most of its sugar. Canadian sugar consumption is almost 1 million tons, and imports account for over 80 percent of that amount. Canadian sugar consumption declined in the late 1980's due to competition from HFCS, but it is rising once again. Mexican sugar consumption has grown at about 4 percent per year since 1974 to 4.5 million tons in 1992/93, which exceeds Mexico's current production level by about 750,000 tons.

Sugar trade is affected by a country's natural resources, milling/refining capacity, production programs/subsidies, and trade agreements. The U.S. HFCS industry, for example, has expanded because of relatively low-priced corn, efficient transportation and storage, and technological enhancements to production capacity. HFCS largely replaced sugar in the beverage market and led to a contraction in U.S. sugar demand. The United States entirely shielded domestic sugar producers from this decline in market share to HFCS by imposing a quota on sugar imports. Consequently, imports fell from about 5 million tons in the 1970's to 1-2 million tons in the last few years.
